Objective-

Mechanical Engineering student at IET DAVV with a foundation in programming and industrial engineering. Skilled in Python and Linux with hands-on AI/ML project experience — building LLM-powered agents, multimodal pipelines, and codebase intelligence tools. Seeking opportunities in software, AI/ML, or AI platform engineering.

Education-

IET DAVV, Indore (Institute of Engineering & Technology - Devi Ahilya Vishwavidyalaya, Indore) (Dec 2026 Expected)
B.E. in Mechanical Engineering

Key Courses: Basics of Programming with C/C++, OOP with Java, DSA, Mechatronics.

Prestige Public School, Indore (CBSE) XII (PCM + IP): 83% (2021) | X (Standard Math): 73.2% (2019)

Technical Skills-

Languages: C/C++, Python | OS: Windows, Linux (Debian/GNOME)

Tools: Git, Gemini API, OpenCV | Engineering: Lean Manufacturing, Kanban, JIT, Time & Motion Study, PFD, PLM

AI/ML: scikit-learn, Pandas, Plotly, LLM integration (SmolLM2), Groq API, LLaMA 4 Scout, RAG concepts, Flask |

Databases: SQL

Data & BI: Power BI, Data Cleaning & Transformation, Data Visualization

Projects-

MechAI — Assembly Line Efficiency [[Website](#)] (InnoVent-27 submission — Jul 2026)

Built a Flask-based industrial AI platform analysing real assembly-line manufacturing data across 17 workstations with an offline-first architecture. Developed 4 ML prediction models using scikit-learn across 12 core modules: AS-IS Summary, Flow Process Chart, Line Balance Analysis, Plant Layout Generator, Efficiency Comparison, SOP Generator, Cost Calculator, Daily Production Reports, Shop Production Schedules, ABC Inventory Analysis, Kanban System, and Predictive Forecasting. Integrated SmolLM2-360M-Instruct (local LLM, Apache 2.0) as an offline AI chatbot ("Ask MechAI") for domain-specific manufacturing insights without API dependency. Created interactive Plotly dashboards and PDF exports, with the platform designed for edge deployment on shop-floor terminals and embedded systems.

Tech: Python, Flask, scikit-learn, Pandas, Plotly, SmolLM2

Assembly Line Efficiency & Material Handling [Final Year Project] -[[Link](#)] (Aug 2025 – May 2026)

Mentor: Dr. Devendra Singh Verma (HOD, Institute of Design DAVV — DAVID-DAVV) · Anand Air Cooler, Indore · Conducted AS-IS time study, establishing a Standard Time of 33.26 min/unit and identifying 24% cycle time loss due to material transport through Process Flow Diagrams (PFDs). Proposed a U-shaped/Continuous Flow layout to replace the existing scattered arrangement, eliminating backtracking and reducing worker travel distance. Designed a Kanban system and introduced Daily Production Reports (DPRs) and standardized Production Schedules to prevent overproduction. Balanced assembly sequences for Motor, Fan, Cooling Pad, and Pump, and documented SOPs and Process Flow Diagrams.

Tools: Lean Manufacturing, Kanban, JIT, Muda Reduction, Time & Motion Study, PLM

Open Source Contributions-

GitLab (gitlab.com/gitlab-org/gitlab) — Merge Request [#248992 \(Merged\)](#) (Aug 2026)

Resolved a flaky Jest test in GitLab's EE frontend (Vue.js) by identifying a race condition in Apollo GraphQL mock resolution and refactoring the spec to use GitLab's `createControlledMockApollo` pattern, aligning with project conventions. Reviewed and approved by two GitLab maintainers.

Hackathons -

GitLab Transcend Hackathon: PrismPulse — GitLab Duo Chat Agent [[Devpost](#), [GitLab](#), [AI-Catlog](#)] (Jun 2026)

GitLab Duo Chat agent analyzed codebases across 7 dimensions: Health Score, Inactive Code, Security, Dependencies, Duplication, Structure, and Test Gaps. Submitted to GitLab AI-Agent CatLog (Agent ID: 1011676).

Tech: Python, GitLab Duo Chat, MCP

Slack Agent Builder Challenge: IgniteEngine — 16 Sparks [[Devpost](#), [GitLab](#)] (Aug 2026)

Built a Slack-native system orchestrating 16 specialized LLM agents for automated story and animation design with sequential context passing. Added interactive branching, agent rerolling, and post-generation content safety validation.

Tech: Python, Slack Bolt/API, Groq API, Slack Block Kit, MCP

Bureau of Indian Standards On-Campus Hackathon: Optimized Safety Helmet Design (Nov – Dec 2024)

Designed conceptual helmet model per IS 4151; integrated IoT-based traffic signal detection for rider safety. Collaborated on material durability and user ergonomics analysis for regulatory compliance | 60–80 teams of 2 each.

Certifications & Workshops-

AI Workshop — Fluxus, IIT Indore -[[Certificate](#)] (Nov 2022) |

Data Visualisation: Empowering Business with Effective Insights [[Certificate](#)] · Forage · Tata (Jul 2026) |

AEO Fundamentals [[Certificate](#)] · HubSpot Academy (Aug 2026)
